

# AISATS

AI Skill Assessment & Training System

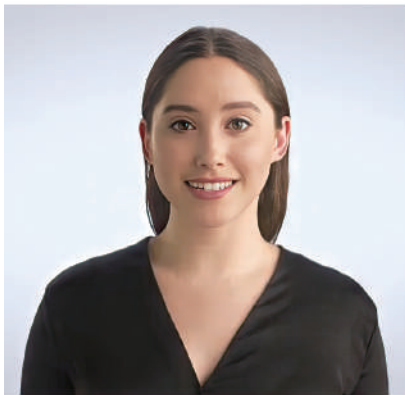

## AI-Driven English Speaking Evaluation

Unveiling true 'English Proficiency'  
beyond usual test scores

## AI English Speaking Evaluation & Test Creation Platform

An AI-powered virtual interviewer provides a comprehensive evaluation on "pronunciation", "fluency", and "task achievement" from your test questions, then accurately forecasts test takers' scores on well-known exams like TOEIC and TOEFL.

## What is AISATS?

AISATS (pronounced "eye-sats") is a cutting-edge AI-powered English speaking assessment and test creation platform. It eliminates the hassle and costs associated with traditional interviewer-dependent evaluations, catering to the diverse needs of businesses and educational institutions. Through interactions with a virtual interviewer, detailed evaluations can be conducted immediately, and the platform also supports the creation of original test questions. As a result, it facilitates the development of genuine communication skills.

### For Businesses

In a global business environment, assessing English speaking skills is necessary for hiring talent and evaluating employee skills. Traditional assessment methods are time-consuming, costly, and biased. AISATS addresses these challenges by offering quick and unbiased evaluations, facilitating efficient talent acquisition and skill enhancement.

### For Schools

Improving English conversation skills remains one of the significant challenges in English education. Many schools face issues such as a lack of teachers with practical conversational skills and the inability to allocate time for individualized assessment and feedback for each student. AISATS, with its unique AI, accurately assesses student skills and provides swift feedback, elevating the quality of English education.

## AISATS vs. Traditional Speaking Tests

### Reducing Time and Costs

AISATS's virtual interviewer evaluates candidates quickly and accurately. This significantly reduces costs, allowing businesses and educational institutions to focus more efficiently on their core operations and educational activities.

### No Need for Interviewers

AISATS automatically dispatches an AI-based interviewer who can speak practical English on your behalf. This alleviates the need of a skilled interviewer, making tests and administration simple and efficient.

### No Need to Schedule Interviews

Candidates can take the test on their own, anytime, anywhere. This flexibility allows for easier administration for you and less stress for the test taker.

### Fair Evaluations

AI technology reduces the evaluation bias that a human evaluator would have towards a test taker. Your test results become more reliable, enabling more efficient decision-making in educational policies and talent acquisition.

## Handling Open-ended Questions, Once a Challenge for AI

AISATS is equipped to handle open-ended questions, a format that AI traditionally struggled with. Beyond simple reading aloud or image description tasks, it can accurately evaluate free-style questions. With this feature, it evaluates not just vocabulary or grammatical knowledge but also true communicative capabilities and the ability to express opinions accurately.

## Create Custom Questions

In addition to selecting questions from an extensive library, we offer a way for you to create any custom questions, tailored to the test-taker's level or curriculum. This guarantees that your tests are tailored to your unique situation.
